

Online-Appendix

Good as Gold or Merely Glitter? Elite Board Members' Impact on Firm Performance

Veronika Timoschenko

Ludwig Maximilian University of Munich

Junior Management Science 10(1) (2025) 44-69

8. Appendix

Appendix 1. List and frequencies of industries in the sample	46
Appendix 2. Summary statistics including industry and year controls.....	47
Appendix 3. Pairwise correlations including industry and year controls.....	48
Appendix 4. Detailed summary statistics ROA and Tobin's Q	50
Appendix 5. ROA industry mean and Tobin's Q market mean	51
Appendix 6. Detailed summary statistics of adjusted ROA and Tobin's Q	52
Appendix 7. Histograms and box plots of ROA and Tobin's Q	53
Appendix 8. Histograms and box plots of the control variables	55
Appendix 9. Individual and mean variance inflation factors	59
Appendix 10. Summary statistics including industry and year controls, after modification ...	61
Appendix 11. Pairwise correlations including industry and year controls, after modification .	62
Appendix 12. Robustness test results: Alternative independent variable “one is a token”	64
Appendix 13. Robustness test results: Alternative independent variable “count”	65
Appendix 14. Robustness test results: Alternative time lag for dependent variables	66
Appendix 15. Robustness test results: No adjustment of dependent variables	68
Appendix 16. Robustness test results: Alternative busy board control	70
Appendix 17. Robustness test results: Non-transformed firm size control.....	72
Appendix 18. Robustness test results: Non-transformed relative CEO power control.....	74
Appendix 19. Post-hoc analysis: Alternative independent variable “one elite member”	76
Appendix 20. STATA code eliteboardmembers.do.....	77

Appendix 1. List and frequencies of industries in the sample

Industry	Frequency
Amusement And Recreation Services	1
Apparel And Accessory Stores	1
Apparel And Other Finished Products Made From Fabrics And Similar Materials	1
Building Construction General Contractors And Operative Builders	1
Building Materials, Hardware, Garden Supply, And Mobile Home Dealers	1
Business Services	12
Chemicals And Allied Products	14
Communications	10
Depository Institutions	4
Electric, Gas, And Sanitary Services	3
Electronic And Other Electrical Equipment And Components, Except Computer Equipment	13
Engineering, Accounting, Research, Management, And Related Services	1
Fabricated Metal Products, Except Machinery And Transportation Equipment	1
Food And Kindred Products	1
Health Services	4
Heavy Construction Other Than Building Construction Contractors	2
Holding And Other Investment Offices	2
Home Furniture, Furnishings, And Equipment Stores	2
Industrial And Commercial Machinery And Computer Equipment	22
Insurance Carriers	4
Leather And Leather Products	1
Measuring, Analyzing, And Controlling Instruments; Photographic, Medical And Optical Goods; Watches And Clocks	5
Mining And Quarrying Of Nonmetallic Minerals, Except Fuels	1
Miscellaneous Retail	2
Primary Metal Industries	4
Real Estate	9
Rubber And Miscellaneous Plastics Products	3
Security And Commodity Brokers, Dealers, Exchanges, And Services	1
Stone, Clay, Glass, And Concrete Products	1
Transportation By Air	2
Transportation Equipment	10
Transportation Services	1
United States Postal Service	1
Water Transportation	1
Wholesale Trade-durable Goods	2
Wholesale Trade-non-durable Goods	3
Total	147

Appendix Table 5. Detailed summary statistics Tobin's Q

Appendix 5. ROA industry mean and Tobin's Q market mean

The marked (*) industry means indicate that in the given sample only one firm was operating in this industry in year t. Since an adjustment would set these observations to a ROA of zero, which might bias results, these firms are dropped from the analysis (16 observations, four firms). This results in excluding the industry divisions (A) Agriculture, Forestry, and Fishing, and (B) Mining. There are no such concerns with Tobin's Q market means.

Industry Division	ROA Industry Mean								
	2010	2011	2012	2013	2014	2015	2016	2017	2018
Agriculture, Forestry, and Fishing	N/A	N/A	N/A	N/A	N/A	8.48*	8.56*	8.98*	7.79*

Appendix Table 9. Detailed summary statistics market-adjusted Tobin's Q

Appendix 7. Histograms and box plots of ROA and Tobin's Q

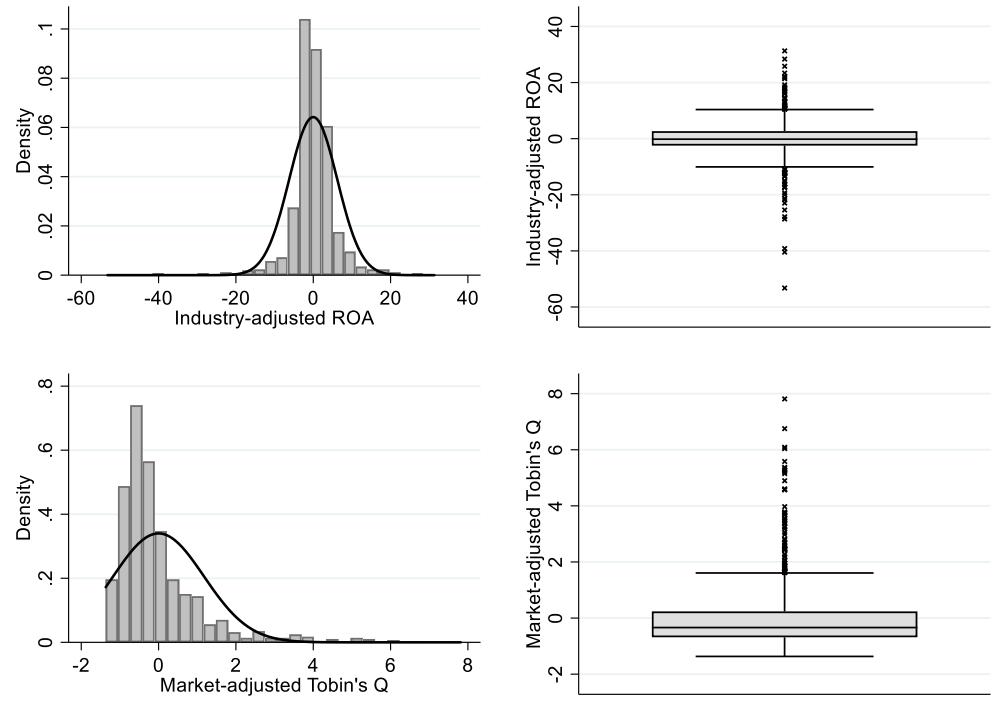

As indicated by the detailed summary statistics, the distribution of ROA is lightly negatively skewed and has positive kurtosis (leptokurtic). A transformation is not possible since the data has negative values. The box plot shows one observation, which might be an outlier. Checking the data revealed that it is not a measurement error and to avoid altering the underlying data it is not dropped from the sample. As indicated by the detailed summary statistics, the distribution of Tobin's Q is positively skewed and has positive kurtosis (leptokurtic). Tobin's Q does not have negative values, therefore, a transformation is possible and I choose to take the natural logarithm of the underlying data. Adjusting the dependent variables does not change the distribution of the underlying data considerably. Since the transformation of Tobin's Q introduces negative values, a transformation is no longer possible.

Appendix Figure 1. Histogram and box plot ROA

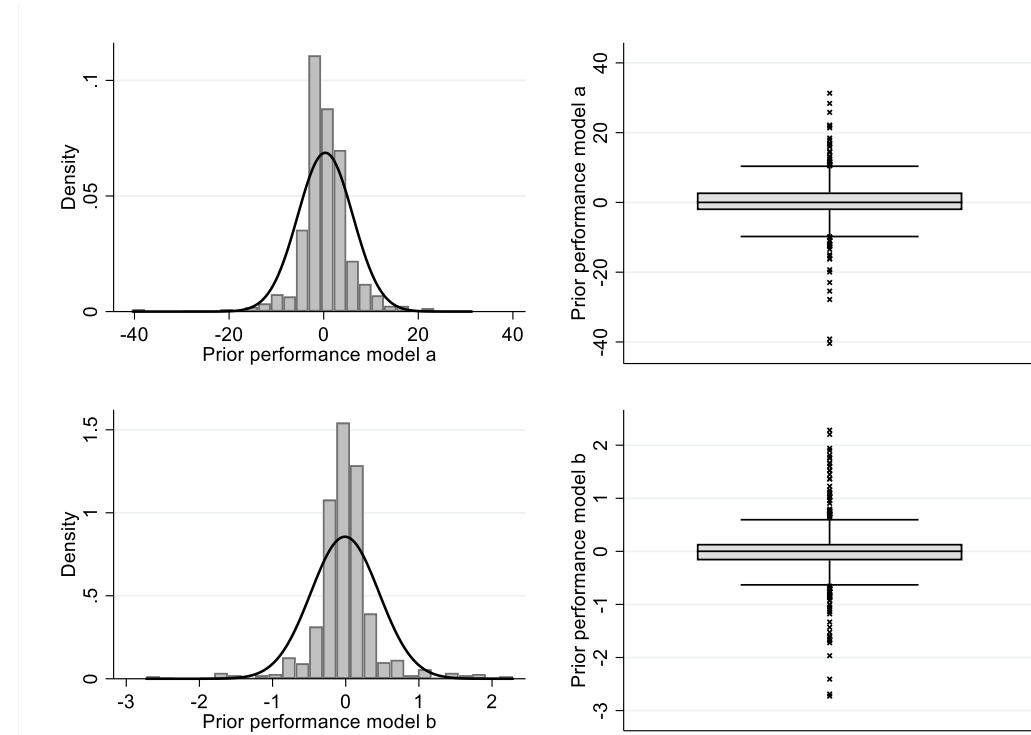

Appendix Figure 2. Histogram and box plot Tobin's Q

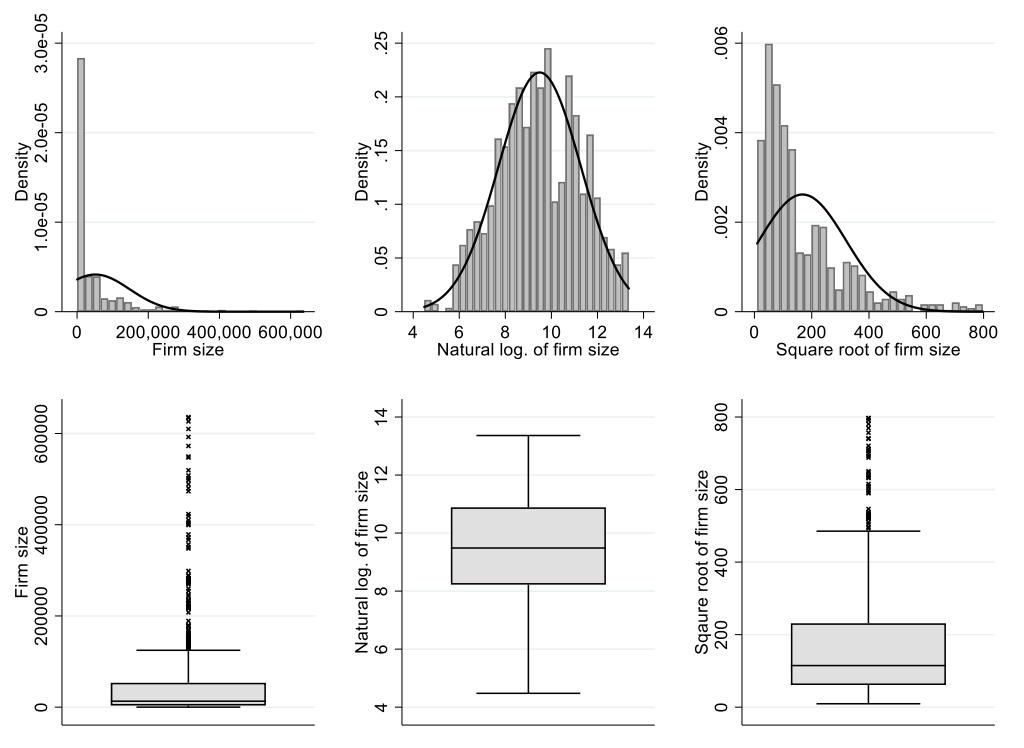

Appendix Figure 3. Histogram and box plot adjusted ROA and Tobin's Q

Appendix 8. Histograms and box plots of the control variables

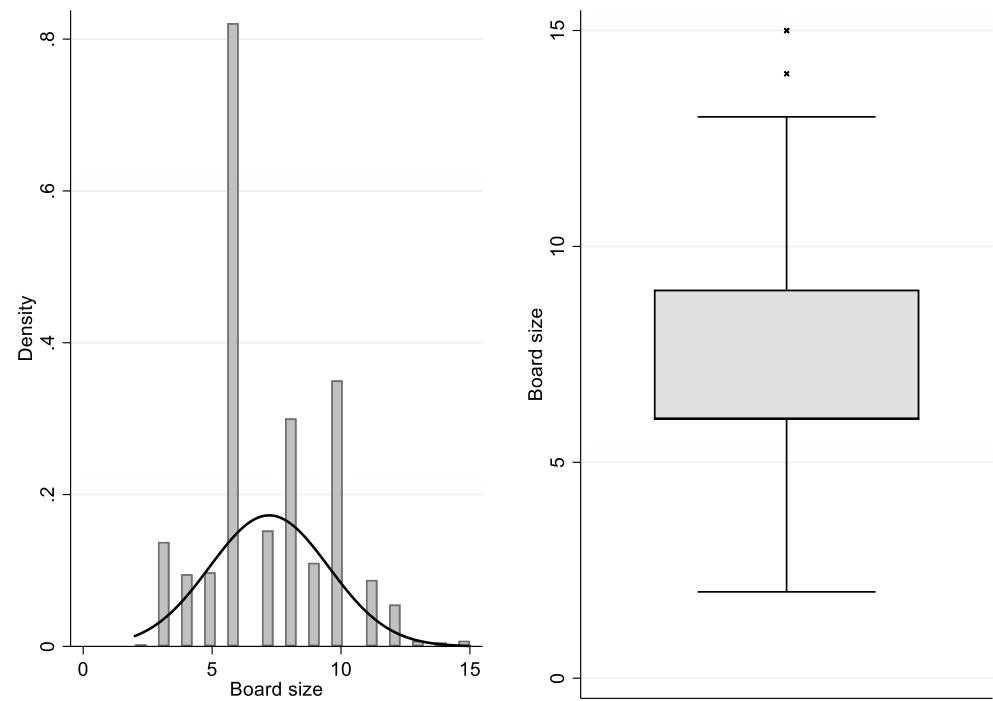

The histograms of the prior performance variables approach normal distribution and the box plots show potential outliers. The outliers are no measurement errors and are not dropped to avoid altering the data (see robustness test). One firm in the given sample has four (or five) employees, which represents an outlier for the firm size variable that might bias the results. I choose to drop the observations (nine observations dropped). Moreover, I take the natural logarithm of the underlying data to improve the distribution, which approaches normality after the transformation. No transformation or dropping outliers is necessary for the board size variable. I choose an alternative operationalization of the busy board variable that excludes elite board members due to the high correlation (see Chapter 5.1) and better distribution. No observations are dropped. Finally, both relative CEO power variables are logarithmized. Values above or beneath whiskers are no measurement errors and are not dropped or altered.
